## Outlook for the day

Indian equity market upheld its negative bias in its previous trading session. Weak global cues disenchantment from the European Central Bank's stimulus decision reverberated across global Markets and depreciation in currency against the US dollar led to intensified decline in index majors. On the technical front Nifty formed a bearish candle indicating negative bias for the market . Fresh buying interest is only visible at the scale of 7937 which being the 'Inverted hammer' formation of the previous week. On the oscillator front, MACD has rolled bullish on daily chart. The rebound rally off Fibonacci retracement level of 7715 has more upside in the near-term followed by the rising trend line support at 7750. Weakness could persist with possibilities of temporary pullbacks which will be an opportunity to add shorts. Trading range will be 7700-7950 in near term. On the F&O front marginal increase in OI followed by decrease in price indicates of short buildup followed by increase in premium, Indian VIX too witnessed a mild pullback and is likely to move upwards on back of an eventful December. On the option front put writers had been unwinding position in 7800 & 7900 strike prices and had been shifting new base for Nifty with fresh writing in 7500 & 7700. However some amount of long addition were seen in ATM strike price call option of 7800 & 7900 followed by writing in higher strike prices of 8200 & 8300. Hence to sum up some amount of relief rally might be witnessed in the market.
